Impact analysis of Basic life support services as a best practice

The impact analysis of attainment of intended objectives were carried out considering analytics provided to participants by IQAC. A total of 233 participants comprises of medical students, postgraduates, BDS students, Students of Junior Colleges, CRPF personnel, self-help group of the community submitted their reflection in Google form. The relevant analytics analysis is appended herewith. Salient features of analysis is given below:

1. Participants were registered for BLS course either due to professional or academic requirements or as a community service provider.
2. The course for few participants were the first training program for life support activity spread over all groups of participants.
3. Basic education of maximum participants was higher secondary.
4. Almost good numbers of Participant had average understanding about method of BLS before this training.
5. Most of the Participants reflected satisfaction about BLS training registration, methods & information. (Combined 5 & 6).
6. Participants expressed satisfaction to the practice sessions conducted for methods of BLS training & facilities provided for conducting training sessions. (Combined 7 & 8).
7. Participants expressed satisfaction alignment of learning objectives of training, material provided by instructor for conducting training session

- and manikins & other equipments provided for practice session.
(Combined 9,10 & 11).
8. Participants expressed their reflection to their capability to use the knowledge & skills acquired for community or patient independently.
 9. Participants expressed their reflection to contribute to welfare of accident victims / patient needing health care support, thus agreed to the objectives of best practice of the college to reduce the time gap to provide health care support and providing medical facilities.
 10. Participants expressed their reflection about their preparedness for necessities of more training session are arranged for tribal & rural areas.
 11. Participants think that health care indicators would improve by practicing such program.
 12. Usefulness of BLS training session is to improve professional skills & to educate common man about Golden hour.

Challenges about the practices:

1. Lack of Pre-knowledge about BLS skill made the imparting of training to Participant.
2. Repeated practice sessions were expected participant during informal interaction during break in between sessions.
3. Awareness of the of program in community self help group is one of the challenges.

Action Plan for taking forward this best practice mainly to more community self-help group in tribal areas to achieve the objectives of this best practice.

- 1. To resolve the challenges and incorporate in the training program of BLS by providing importance of program to achieve golden hour objective and enhance the duration of training program by giving enough opportunity for practice.**
- 2. Peer to Peer assessment and self-assessment process after training session to be incorporated.**
- 3. To organize the awareness programs prior to conducting the BLS in rural and tribal areas.**
- 4. To constitute more teams of trained faculty and certified postgraduates and medical students for conducting training simultaneously at multiple areas of community.**
